COMP6001 GUI Programming

Semester 17B

Assessment 3 (30% of final mark)

Milestone 1: Monday the 9th of October 2017 @ noon. (Studyweek)

Submission: Git repository link pasted in Moodle

Requirements: Knowledge of Learning outcome 1, 2 and 3

Learning Outcomes

Learning Outcome Three:

Design and develop a simple application of medium complexity to demonstrate the Graphical User Interface programming skills.

Objective

As part of making an application, you need to know how to improve on it. For this application you are to improve on 1 (one) bug and add 1 (one) feature from your group application.

Milestones

- This is a individual assessment and you are to improve on these aspects on your own. This might be a bug or a feature.

- You are not allowed to fix the same bug or improve on the same feature as your team mates did.

- You are to list your bug / feature as an issue on the main repository and create a branch from there. This will create the branch for you with the latest code.

- You need to test that the feature adss to the project or that the bug fixes the actual issue (no unit testing).

- For each feature / bug you need to write up 100 words to explain what the improvement is.

- Merge your code into the main repository when you have completed your task. Note that the person who merges first will unlikely run into conflicts.

Marking Guide

Item Description	Marks
1	**100** Clearly describe the bug and feature you are working on in this milestone. They should each be up to 100 words. (not over)
Describe the bug(s) and or feature(s) (25 marks)	**50** Describe either one bug or one feature or have a description over 100 words.
	0 No information has been supplied or explained / the bug or feature described matches another team mates
2	**100** Either use bitbucket or github to list the issue. Your module will be marked from there.
Issue can be found on the main repository (25 marks)	**50** Setup the improve manually and need to inform on how I need to get to it.
	0 For using a USB drive and not record to the repo was setup.
3	**100** Testing that your bug is fixed and that your feature works. Comment in your code the issue number given to you by BB or GH. this is used to search for your item.
Testing your code (25 marks)	**50** Test that your bug or feature works, but needed to provide supplemental material to tell me where the issue is.

	0 Issue was not fixed or completed despite the extra code provided.
4	**100** Bug / Features nicely integrated into the code and no issues are left during the merge.
Merging your code (25 Marks)	**50** Your code was added, but the conflict of issue was not resolved
	00 No conflicts where resolved.
